Case Study

Appointment Booking Automation for a Dental Clinic

Healthcare

Booking System

Automation

WhatsApp

15 hrs
per week — before

15 min
per week — after

What was built

Built **SmartAppointment** for a growing dental clinic that replaced their manual WhatsApp + spreadsheet process. The system handles online patient booking, automated reminders via email & WhatsApp, and an admin dashboard for managing appointments.

The result

Reduced the time spent on sending reminders and manually updating the schedule from **15 hours per week** to **15 minutes per week**.

This case study is based on a real-world implementation of the backend architecture designed for appointment management.

Offer Page

Custom Business System

What I build

Custom software systems that replace manual Excel, WhatsApp, or paper processes with automated, reliable digital tools.

Who it's for

Small to medium-sized businesses tired of losing time on repetitive admin tasks and looking to professionalize their operations.

What you get

- A tailor-made web application that fits your exact workflow
- Automated notifications (email/WhatsApp) to reduce no-shows and manual follow-ups
- An admin dashboard so you can manage everything from one place

Starting price

\$1,500 depending on complexity

Opening Message (WhatsApp / LinkedIn / In Person)

Hi [name], I build custom software systems for businesses that are still managing their operations manually on Excel or WhatsApp. I've built inventory systems, booking tools, and delivery dashboards for small businesses. Would it make sense to show you what that could look like for [their business name]?

Answer to "How much?"

Depends on the scope but most projects start at \$1,500. I can give you an exact number after a 20-minute conversation about what you need.

Answer to "Can I see your work?"

Yes — here's a live demo of a system I built: [your URL]
