SUMMARY

I am a Full-Stack Developer with 3+ years building high-performance storefronts and platforms using React/TypeScript, Next.js, PHP/Laravel, Python, and Node.js. I deliver measurable outcomes—faster Core Web Vitals, higher conversions, and reliable subscriptions—through sound architecture, CI/CD (Docker, Kubernetes, GitHub Actions), and robust testing (Jest, Cypress, PHPUnit). Experienced in payments, SEO, and accessibility (WCAG AA).

PROFESSIONAL EXPERIENCE

Full-Stack Developer | S.I.C | Remote OCT 2024 – Present

- **Architected a centralized School ERP** using a decoupled architecture (Laravel API + React/Next.js) to manage complex academic workflows, course prerequisites, and cross-institutional reporting.
- **Engineered a "Dual-Factor Chain of Custody" security protocol** integrating RFID/NFC hardware with a mobile OTP verification system, reducing unauthorized student pickups by 100% in pilot phases.
- **Developed an automated Financial Gateway (Fee-to-Access)** linking Paystack/Flutterwave APIs to student attendance modules; enforced "No-Pay, No-Entry" logic via real-time gate scanner synchronization.
- **Implemented a tamper-proof Audit Logging system for grade integrity** using SHA-256 hashing to track every modification to student GPAs, effectively eliminating unauthorized grade tampering by staff.
- **Designed an "Offline-First" synchronization engine** using local SQLite caching and background workers to ensure gate security and attendance tracking remained functional during 90% of local network outages.
- **Optimized system performance via Redis caching and Database Indexing**, reducing query response times for multi-student GPA calculations by 45% across large datasets.
- **Led a team of 3 developers** through a modular implementation of the USOS-standard curriculum structure, ensuring 100% compliance with local academic credit requirements.

AI Benchmarking | MERCOR | Remote (part-time) APR 2024 – OCT 2024 • Automated LLM evaluation pipelines (FastAPI + AWS Lambda/SQS), reducing evaluation turnaround by 40%.

- Implemented load testing (k6) and structured logging (CloudWatch with correlation IDs) to meet RPS and p95 latency targets.

Self-Employed | Full-Stack Developer & Product Builder | Remote JAN 2022 – Present

AI-Powered LinkedIn Content Assistant – Voice-to-Content Automation Platform

- Architected full-stack content generation platform enabling professionals to transform voice memos into polished LinkedIn posts using AI style matching, reducing content creation time by 80%.
- Engineered **Node.js/Express** backend with **PostgreSQL** database featuring tier-based access control (free/basic/executive), JWT authentication with refresh tokens, and API key system for Chrome Extension integration.
- Developed Style DNA Engine using **OpenAI GPT-4o** to analyze LinkedIn post patterns (tone, structure, emoji usage) and generate personalized writing profiles; integrated **Whisper API** for high-accuracy audio transcription with **AWS S3** audio storage and automated cleanup pipelines.
- Built Chrome Extension using **Manifest V3 Side Panel API** with real-time draft synchronization via **WebSockets**, human-in-the-loop copy-to-clipboard workflow ensuring platform compliance, and **OLED-optimized dark mode UI** with glassmorphic design system.
- Implemented **responsive React web application** featuring voice recording interface with waveform visualization, style profile management wizard, draft editor with LinkedIn formatting, comprehensive settings panel, and submit report system with ticket generation.
- Designed multi-tier subscription architecture (Stripe-ready) with usage tracking, rate limiting, and feature gating; created executive-grade UI/UX using **Tailwind CSS**, **Framer Motion**, and **Geist/Inter** typography optimized for extended professional use.

Built with: TypeScript, Node.js, Express, PostgreSQL, React, Tailwind CSS, OpenAI API (GPT-4o, Whisper), AWS S3, WebSockets, Socket.io, Chrome Extension APIs (Manifest V3, Side Panel), JWT, bcrypt, multer, node-cron, Framer Motion

Global Podcaster – AI-Powered Podcast Translation Platform

- Architected RESTful backend with Node.js, deployed on AWS Lambda for scalability.
- Integrated AWS Kinesis for real-time stream processing and updates.
- Implemented GraphQL (Apollo Server) endpoint for reporting dashboard.
- Engineered FastAPI backend with SQLAlchemy ORM supporting 10,000+ concurrent translation jobs.
- Implemented agent-based microservices architecture for automated RSS monitoring, transcription, and voice synthesis.
- Integrated multiple AI APIs (Deepgram, Mistral AI, ElevenLabs) with error handling and retry logic.
- Built real-time WebSocket system for translation progress updates and background task scheduling.
- Designed PostgreSQL schema with optimized queries, reducing API response time by 60%.

Built with: FastAPI, Python, SQLAlchemy, PostgreSQL, WebSocket, Docker, Agent Architecture, AI APIs
GitHub: github.com/dreamsbuilder/GlobalPodcaster

AI-Powered Productivity Assistant – Cloud-Native AI Integration Platform

- Architected RESTful backend for an AI productivity assistant using Node.js (Hono), deployed on AWS ECS with Docker for scalability and resilience.
- Designed and implemented a RESTful API with PostgreSQL database for core functionality and Pinecone

vector database for long-term, semantic memory retrieval, enabling context-aware AI responses.

- Engineered a real-time communication system using WebSockets and a serverless Webhook processing pipeline on AWS Lambda to handle events from integrated services (Google Calendar, Gmail, Notion, Slack).
- Developed secure OAuth 2.0 flows for multiple third-party providers (Google, Slack) and a robust notification service with multi-channel delivery (in-app, email, push).

Built with: TypeScript, Node.js, PostgreSQL, AWS (Lambda, Kinesis), Hono, Redis, Pinecone, Docker, WebSockets, OAuth 2.0, REST APIs

GitHub: github.com/Booze33/loh_frontend

Liveblocks – Real-Time Collaboration Platform

- Engineered WebSocket communication layer using Node.js and CRDT strategies.
- Leveraged Kafka for real-time event distribution and conflict resolution.
- Improved session throughput by 60%.

Built with: Node.js, Kafka, Clerk, CRDTs, Liveblocks API

GitHub: github.com/Booze33/liveblocks

Live Demo: liveblocks-sepia.vercel.app

Launch AI – Startup Tools for Student Founders

- Developed MVP builder and feedback analyzer; increased prototype creation by 50%.

Built with: Python, Django, Falcon AI

GitHub: github.com/Fouad-Khelil/launchai/

EDUCATION

Remote Full Stack Web Development Program | MICROVERSE FEB 2023 – NOV 2023 • 1300+ hours;

Ruby/Rails, JavaScript/React/Redux; remote pair programming, industry gitflow, daily standups.

Warsaw University of Technology | Warsaw, PL SEP 2023 Aerospace Engineering

- Aerodynamic analysis of supersonic airfoils; relevant coursework in calculus, CS, data analysis, graphics, mechanics.

TOOLS & STACK

- Frontend: React, TypeScript, Next.js, Tailwind CSS, SSR/SSG/ISR, Storybook, Accessibility (WCAG AA), Performance (Core Web Vitals).
- Backend: PHP, Laravel, Node.js(Express/Hono), Python, REST/GraphQL, AuthN/AuthZ, webhooks/queues, caching with Redis.
- Data: MySQL, PostgreSQL, MongoDB; Oracle DB, indexing and query optimization.
- eCommerce: WooCommerce, Shopify (themes/apps), Stripe/PayPal, subscriptions, checkout, PCI-aware flows, technical SEO.
- DevOps & Quality: Docker, GitHub Actions, Kubernetes, Nginx, Cloudflare, AWS (Lambda/S3/CloudFront), Vercel, Sentry; Jest/RTL, Cypress/Playwright, PHPUnit/Pest.
